Chapter 1 Cover Pages And Output Type Testing

This PDF file demonstrates cover page generation and output type selection. Output type is controlled by the .ditaval filtering and output.type paramter.

This PDF file is generated by the following DITA-OT command-line parameter: `-Dargs.filter=pdf5_ml_print_mono.ditaval`, `-Doutput.type=print-mono`

Chapter 2 Output Type Page Layout Feature

In the print output, the following layout features are adopted:

- The cover pages and back cover pages takes two pages respectively.
- The page layout is different in odd page and even pages. In both page the inner margin is wider than the outer margin. This means the left margin of an even page is same as the right margin of an odd page and the right margin of an even page is same as the left margin of an odd page.
- The chapter page begins from odd page. At the end of chapter, the blank page will be inserted to adjust pages.
- The total page count will became even.
